

Hafesa Group strengthens the operational capacity of its Bilbao and Motril terminals

Hafesa Group, the holding company dedicated to the marketing and distribution of petroleum products, **strengthens its operational capacity** by expanding the infrastructure of its two main port terminals located in **Bilbao** and **Motril**. In **DBA Bilbao Port's** case, **more than 2 million euros** are being invested to improve operational capacity, fitting out one of the tanks for the storage and distribution of gasoline. In this way, the tank can be connected to the product loaders by means of independent lines. This improvement will allow us to implement systems that will mix diesel fuels with biofuels with the firm objective of **continuing to opt for a cleaner and more eco-friendly fuel**.

In the case of Hafesa's facilities in **Motril**, all the plant's **operating control systems** are being integrated and a **system to control stock and operations** is being created and linked to the company's central system. Another step in the **company's digitization strategy**. This operation is the result of the firm determination to respond to **the most demanding needs for storage** and to the company's ambitious commitment to **improve its presence in the market**, consolidating, once again, its position as one of the biggest oil operators in Spain. In the words of Bruno Álvarez, CEO and COO of Hafesa Group, *"these operations are one more example of the group's firm intention to expand its operational capacity through digitalization and to continue betting on cleaner and more eco-friendly fuels"*.

About the Hafesa Group

The Hafesa Group is a holding company involved in the marketing and distribution of petroleum products. From import, through storage and distribution, to sale at gas stations and gas centres, the Hafesa Group covers all downstream phases.
